

Are the Hollywood elite fleeing Fukushima fallout?

Natural News/Fourwinds/With thanks to David

Following on from the comment that I wrote as a foreword to the Fukushima article that I put on here a couple of days ago in regard to the radiation leak being a world problem – Could this be the reason for the Hollywood elite selling up and moving out in droves?

Or is something else coming?

Fukushima fallout – thyroid damage in US children

4 April, 2013

By Staff Writer
NYR Natural News

Natural Health News – If you are still living with the belief that disasters that happen in another country happen ‘somewhere else’, here’s a stark reminder that there is no ‘somewhere else’ on our planet.

Researchers working with the Radiation and Public Health Project (RPHP) in New York have discovered that the Fukushima nuclear disaster has had far-reaching health effects showing that young children born on the US West Coast are 28% more likely to develop congenital hypothyroidism.

RPHP is a non-profit educational and scientific organisation, established by scientists and physicians dedicated to understanding the relationships between low-level, nuclear radiation and public health.

In examining post-Fukushima conditions along the West Coast, the researchers found American-born children were developing similar conditions to those found in Europeans after the 1986 meltdown of the Chernobyl Nuclear Power Plant.

US children born after the 2011 meltdown of Japan’s Fukushima Nuclear Power Plant are at high risk of acquiring congenital hypothyroidism say the researchers.

“Fukushima fallout appeared to affect all areas of the US, and was especially large in some, mostly in the western part of the nation,” wrote the researchers in their study in the [Open](#)

Nuclear fallout doesn't respect national borders

The researchers made their discovery by looking specifically at levels of radioiodine isotopes (I-131).

Just a few days after the meltdown, I-131 concentration levels in California, Hawaii, Alaska, Oregon and Washington were up to 211 times above the normal level, they say.

This is the way the wind blows; fallout from Fukushima quickly reached the West coast of the US

At the same time, the number of congenital hypothyroid cases began to skyrocket, increasing by an average of 16% from March 17 to Dec. 31, 2011.

Between March 17 and June 30, shortly after the meltdown, newly born children experienced a 28% greater risk of acquiring hypothyroidism.

In 36 other US states outside of the exposure zone, the risk of congenital hypothyroidism decreased by 3% – a finding that researchers believe may serve as further proof that Fukushima had something to do with the unusually high results found on the West Coast.

The disease is usually rare, but can manifest into a serious condition if left untreated. Affected fetuses and children may suffer serious developmental delay – and a recent [study](#) found that 44.2% of a sample of 94,975 Fukushima children have had

thyroid ultrasound abnormalities as a likely result of their exposure to the radiation.

West coast in the firing line

Japanese officials (and, to be fair, officials and nuclear apologists elsewhere) have always downplayed the Fukushima meltdown and its potential to cause health havoc outside the meltdown area. Even so very soon after the meltdown radiation was being [detected in Tokyo](#) far beyond the evacuation zone.

In [measurements](#) made just after the meltdown and posted online, scientists from the University of California at Berkley detailed alarmingly high levels of radioactive isotopes in soil samples from across the state of California.

Even as far [away as Boston](#), US scientists were detecting I-131 in samples of rainwater soon after the disaster.

Just like Chernobyl

Radioactive iodine that enters the human body typically gathers in the thyroid, which releases growth hormones. Radiation exposure can, therefore, stunt the growth of a child's body and brain. Exposure can have lifelong effects, as scientists studying the Chernobyl nuclear power plant meltdown in 19896 have found.

Decades after the accident, a 2011 study by the National Institutes of Health found that higher absorption of I-131 radiation led to an increased risk for thyroid cancer among victims of Chernobyl radiation – a risk that has not diminished over time.

The children who were unfortunate enough to be exposed to Fukushima radiation on the US West Coast, as well as in Alaska and Hawaii could now face similar risks.

“Escape from Los Angeles”-A Massive List of Hollywood Elite Selling Homes and Fleeing California (update: just listed) and more...

Fourwinds10.com (click)

In my 10 years of being a real estate agent in la,

I have never seen AN EXODUS like this one.

“Maps of Stars Homes” have now become “Maps of Stars Homes FOR SALE”. Everyone is bailing out of Los Angeles this month,

drastically reducing their mansions by millions of dollars,

taking enormous losses, and are DESPERATE TO SELL ASAP.

Here is the current list of the stars who are bugging out:

adam brody

america ferrera

amy smart

anna nicole smith(yes she's gone already but the estate)

ARNOLD SCHWARNEGGER

ashlee simpson

ASTON KUTCHER

avril lavigne

BARRY MANILOW

bert lahr

beth grant

CANDY SPELLING

CHARLIE SHEEN

charlize theron

cher

dennis quaid

dick clark(estate)

the rock dwayne jonson

ELLEN DE GENERATE

elvis presley(estate)

frankie muniz

HARRISON FORD

heath ledger(estate)

heidi klum

hilary duff

hillary swank

howie mandel

JENNIFER ANDERSON

JENNIFER LOVE HEWITT

JIM CAREY

kd lang

kara dioguardi

kate walsh

katherine heigl

KATY PERRY

kelsey grammer

lauren conrad

LEONARDO DI CAPRIO

MARK WAHLBERG

mathew perry

MEG RYAN

megan mullully

MEL GIBSON

NEIL PATRICK HARRIS

nick lachey

P.DIDDY

penelope cruz

pierce brosnan

pink

reese witherspoon

RHIANNA

robin williams

sally feilds

SCARLETT JOHANSSON

SHARON STONE

SYVESTER STALLONE

tori spelling

USHER

wayne brady

zsa zsa gabor(estate)

This is just a partial list, still not including movie directors, producers, and the millions of "movie industry" people in LA.

What do they know?

Where are they going?

I have never seen a massive exodus like this...

I'm a bit uneasy about this situation.

UPDATE:

MORE TO THIS LIST

listed in feb 2013:

britney spears

chris brown

christina aguilera

josh groban

mel b

micheal jackson(estate)

ozzy&sharon

paula Abdul

sonny bono(estate)

max weinberg

john mayer

just listed this week:

larry david

cheryl tiegs

pam andersen

fred durst

brad paisley

pete sampras

AND SOME MORE:

DONALD TRUMP

JODIE FOSTER

kourtney kardtrashian

jenny garth

scott baio
