

MMR: Mass Murder Recipe – Dedicated to the memory of Joanne Ogden. *MUST READ*

The Daily Mail

Spivs Comment (updated)

Following the posting of the following articles this morning (10/2/13), a friend of mine got in contact to tell me about her God-daughter who died of a swollen heart 2wks after having the MMR jab.

At the inquest the verdict was left open despite the batch being withdrawn and no responsibility acknowledged..

Then again no responsibility would be acknowledged, would it. To do so would leave those people open to a charge of mass murder.

My friends God-daughter was named Joanne Ogden and she was only 17 months old when she died. Still not convinced that the MMR is unsafe? Read the list of names at the bottom of this page.

Once you have read it, have a little think about what you would prefer: A spotty unwell child for a week or a brain damaged/maybe even dead child. I know what I would prefer...

These government psychopaths – and make no mistake, that is what they are – are killing us slowly but surely. They have to be removed from power and brought to trial now. This madness has to stop. Lets go to war.

(The following is how the article appeared this morning)

Measles cases at 18-year high because parents are failing to get children vaccinated

I see the Government have employed their propaganda machine AKA the Daily Mail again, to throw the fear of god into the brain dead.

OH FUCK! WE ARE ALL GOING TO DIE OF MEASLES COS OF THE THOUGHTLESS BASTARDS WHO REFUSED TO LET THEIR CHILDREN HAVE THE MMR JAB. C'MON! RUN FOR THE FUCKING HILLS... RUN, RUN, RUN!

What a fucking load of old bollocks. If your child was vaccinated then what the fuck are you worried about?

Unless of course the injection doesn't work. If it doesn't then it was pointless risking giving your child Autism or possibly even worse wasn't it? The Daily Mail apparently forgot to include their old article on the subject while reporting on this scare tactic... But don't worry, I did it for them.

Course, as Measles outbreaks go, there was also the 1994 outbreak, the 2003 outbreak, the 2008 outbreak... We were all going to die in 2008 for definite. Oh then there was the 2011 outbreak.

I had measles... I didn't die... What do you mean "pity". Fucking horrible bastards.

Course, if the MMR was safe Psychopath Blair would have said whether or not he made his his son Leo have it instead of rigidly sticking by his "not telling" tactic. Why are you not telling Mr Mad? Is it because he didn't fucking have it, because it is fucking dangerous? It isn't Rocket Science.

Then again, a few years down the line, he did say that Leo had in fact had the jab... Then again, his nickname isn't Tony B-Liar for nothing. If he had it, the head banger would have said at the time.

Course, if you don't believe that Blair is lying about his boy having the jab, you could always ask the former HEALTH SECRETARY, Alan Milburn, and John Hutton MP and Jacqui SmithMP ((Both former HEALTH MINISTERS). Mind you, they wouldn't tell you either . Wonder why not?

Personally, I think the government should be more concerned with the suicide rate in England and Wales. There are triple the number of deaths by suicide. You see, no one fucking dies of measles in this country. I wonder why the suicide rate continues to rise rapidly though... Now let me fucking think?

- In 2011 there were 6,045 suicides in people aged 15 and over in the UK, an increase of 437 compared with 2010.
- The UK suicide rate increased significantly between 2010 and 2011, from 11.1 to 11.8 deaths per 100,000

population.

- There were 4,552 male suicides in 2011 (a rate of 18.2 suicides per 100,000 population) and 1,493 female suicides (5.6 per 100,000 population).
- The highest suicide rate was in males aged 30 to 44 (23.5 deaths per 100,000 population in 2011).
- The suicide rate in males aged 45 to 59 increased significantly between 2007 and 2011 (22.2 deaths per 100,000 population in 2011).
- Female suicide rates were highest in 45 to 59-year-olds in 2011 (7.3 deaths per 100,000 population).

Measles cases at 18-year high because parents are failing to get children vaccinated

- 2,016 confirmed cases in England and Wales in 2012, the highest annual total since 1994
- Teenagers not vaccinated when they were younger are at particular risk of becoming exposed, say experts
- Several smaller spreads have also occurred in travelling communities across the European Union

By [FIONA MACRAE](#)

PUBLISHED: 11:27, 8 February 2013 | **UPDATED:** 01:12, 9 February 2013

There were 2,016 confirmed cases of measles in England and Wales in 2012, the highest annual total since 1994

Cases of measles are at a record high, health officials have warned.

In 2012, there were 2,016 cases of the potentially deadly disease in babies, children and adults in England and Wales.

This makes it the biggest outbreak since cases were first formally recorded almost 20 years ago.

The total is more than six times that of 2002 – and almost 40 times higher than 1998, when just 56 cases were documented.

With measles also rife in France, Italy and Spain, it is thought that some outbreaks were sparked by infections brought back from abroad by holidaymakers.

Vaccination of toddlers is high but there is particular concern that the disease, which is spread through coughing and sneezing, is hitting teenagers who were not given the MMR jab as babies.

This will include some whose parents feared the safety of the jab, following research by Dr Andrew Wakefield linking it to bowel problems and autism. This work has since been roundly discredited.

There have also been small outbreaks in travelling communities.

Health experts warned that measles can kill – and needs to be taken seriously.

Dr Mary Ramsay, head of immunisation at the Health Protection Agency, said: 'Measles is often associated with being a disease of the past and as a result people may be unaware that it is a dangerous infection and can lead to death in severe cases.'

MEASLES: THE SYMPTOMS

- Cold-like symptoms, fever
- Red eyes and sensitivity to light
- Greyish-white spots in the mouth and throat
- After a few days, a red-brown spotty rash will appear.
- It usually starts behind the ears, then spreads around the head and neck before spreading to the legs and the rest of the body

'Parents should ensure their children are fully protected against measles, mumps and rubella (German measles) with two doses of the MMR vaccine.'

'Parents of unvaccinated children, as well as older teenagers and adults who may have missed MMR vaccination, should make an appointment with their GP to get vaccinated.'

'Measles continues to circulate in several European countries which are popular with holidaymakers.'

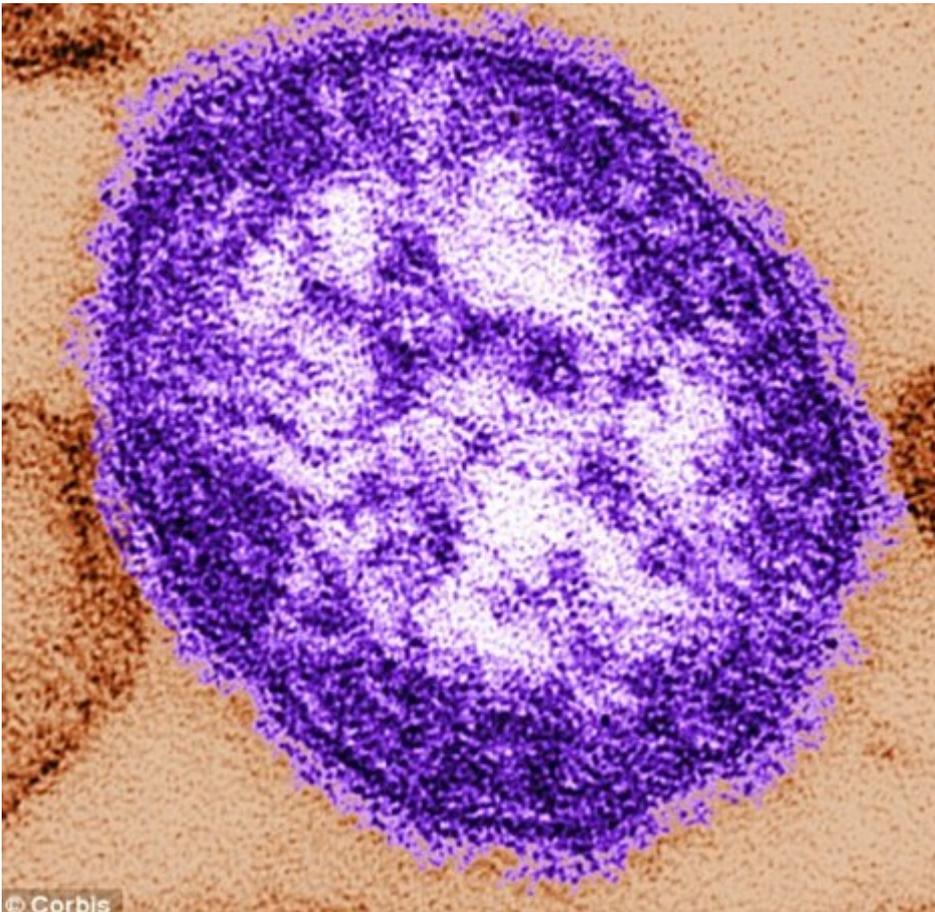

The UK, along with France, Italy, Spain and Romania, accounted for 87 per cent of the 7,392 cases that occurred in the EU last year.

In Britain, there have been prolonged outbreaks in Merseyside, Surrey and Sussex.

Between January 2012 and the end of the January this year, there were 622 cases in and around Liverpool -and around a third of these were admitted to hospital.

Teenagers were most likely to be affected, while babies that were too young to be vaccinated made up the second biggest group.

Lancashire is another measles hot spot, with around 100 cases in the last year, including 28 cases in the Morecambe Bay area in the past three to four weeks.

Teenagers who were not vaccinated at the routine age are at particular risk of becoming exposed to the highly infectious viral illness

(pictured)

Most of these were centred on eight schools.

Health officials there plan to write to the parents of 30,000 children aged five to 16 who haven't been vaccinated.

In addition, a leaflet about measles has been written for travelling people, amid concerns about a rise in cases in their communities.

Measles is very contagious, with one person who is ill able to infect more than 15 others, if they haven't been vaccinated or had the virus before.

At the beginning, someone with measles can feel like they have a bad cold, with a fever, dry cough and red, or sore, eyes.

A few days later, a red-brown spotty rash appears. It usually starts behind the ears, then spreads around the head and neck before covering the body.

Potentially lethal complications include pneumonia, hepatitis and swelling of the brain around one in five who catch the bug will spend time in hospital.

However, there have not been any deaths for several years.

Teenage spread:

Vaccination of toddlers is high but there is concern that the disease, which is spread through coughing and sneezing, is hitting teenagers who were not given the MMR jab as babies

'Antibiotics link' to MMR and autism

by STEPHEN HULL, Metro

- [Comments \(0\)](#)

Antibiotics: link found between autism, MMR and antibiotics

Antibiotics may be to blame for hundreds of children developing autism after having the controversial MMR jab, it has been claimed.

More than two-thirds of youngsters with the condition received four or more antibiotics in their first year, a survey revealed.

It is thought the drugs weakened their immune systems, leaving them unable to withstand the impact of the triple jab.

Jon Tommey, publisher of Autism File magazine, attacked a 'cavalier attitude' to the measles, mumps and rubella jab and similar inoculations.

'Doctors need to pay more care to whether a child is well enough to be vaccinated,' he said.

Mr Tommey said youngsters received four sets of multiple vaccines in their first year.

'There is evidence that giving children with weakened immune systems vaccinations such as MMR could damage sensitive areas, such as chemical pathways in the brain,' he added.

Mr Tommey said his seven-year-old autistic son was perfectly normal but received five courses of antibiotics in his first year.

Shortly afterwards, he had the MMR jab – not long after a course of antibiotics and while he was ill.

The Autism Research Centre said: 'There seems less care these days about checking to see if a child is fit for immunisation.'

Anti-MMR campaign group JABS said: 'There must be an urgent investigation into why our children are ill.'

The Department of Health insists the MMR vaccine is safe.

- *A senior government adviser has said that Tony Blair's refusal to say whether his son Leo was given an MMR injection had helped generate a lack of public*

confidence in the jab, writes Andy Dolan.

Professor Brent Taylor challenged the Prime Minister to reveal whether Leo, now aged three, had been immunised.

Latest figures show that one in five two-year-olds are not being given the measles, mumps and rubella jab – the highest proportion since the triple vaccine was launched in the late 1980s.

If Leo had the jab at the age of two – as is standard practice – he would now be due for a booster.

But Mr Blair and his wife Cherie have refused to comment on the matter, citing their son's right to privacy.

Professor Taylor said: 'There's no doubt if Tony Blair was able to come out publicly and say, "Yes, of course Leo had the MMR vaccination, of course he is going to get the booster", then that would be a useful additional support to public confidence.'

Blair silent over Leo's MMR jab

The Telegraph

TONY BLAIR refused to tell parents yesterday whether he had allowed his 18-month-old son Leo to be given the MMR vaccine.

Challenged in the Commons by Julie Kirkbride, the Tory MP and mother of a 14-month-old boy, the Prime Minister said he would not enter into a public discussion about the health of his children.

He expressed confidence, however, in the vaccination, saying that guidelines, which advise parents to inoculate children with the combined measles, mumps and rubella vaccine, were

sound.

The Government was supported by the World Health Organisation, the British Medical Association and other health bodies, he said.

It is rare for Mr Blair to be asked questions about his family during Prime Minister's Questions. But he has come under pressure to disclose specific information about Leo amid concern [that the vaccine could be linked to autism](#) and bowel disease.

Miss Kirkbride said: "I was disappointed that the Prime Minister did not use the opportunity in the Commons to reinforce public confidence in the vaccine.

"I can only assume that he has something to hide, which is to say that little Leo has not had his jab."

Fears among parents about MMR are leading many to have their young children vaccinated privately with separate jabs at a cost of almost £200, or not at all.

Alan Milburn, the Health Secretary, and John Hutton and Jacqui Smith, both health ministers have refused to say whether their children have had the MMR jab.

Remember My Name

Alan Joe Ream Yurko

DPT/Hib/Polio/Hepatitis B vaccines.

Vaccine induced encephalitis, meningitis and death.

Zachary Helms

DPT, oral polio drops, sudden death.

Harriet Moore

MMR, encephalitis, death.

Great Ormand Street Hospital found measles, mumps and rubella viruses in her spinal fluid and measles viruses were found in her liver and muscles via tests at a Dublin hospital.

Pamit Barman of Narsingbari

Measles vaccine, vomiting, upset stomach, fever, respiratory arrest, death

Bhagyasri Swargiary of Dikiajan,

Measles vaccine, fever, vomiting, respiratory arrest, death

Jenny Tetlock

Gardasil vaccine, paralysis, death

Christina Richelle Tarsell

Gardasil vaccine, sudden death

Amber Kaufman

Gardasil vaccine, seizure immediately after vaccine, stopped breathing, artificial ventilation for 3 days, death.

Megan Hild

Gardasil vaccine, sudden death

Jasmin Soriat

Gardasil vaccine, respiratory paralysis, death

Madyson Williams

MMR, constant seizures from time of MMR to death, 10 days later.

Christopher Clark

Died a couple of hours after DPT, hib, polio vaccines.

Harry Clark

Died 24 hours after vaccination with DPT, hib, polio

Mother accused of murder due to both her sons dying. Later acquitted after serving years in prison for a crime she didn't commit.

Then she killed herself as she was a broken woman after all the heartache.

Christopher Coulter

MR vaccine, from the 1994 MR vaccine campaign.

Mother found the 15 year old dead in bed.

Rachel Lacy

Soldier who received five vaccines including anthrax, got a heart infection immediately afterwards, died one month later.

Dylan Scott

DPT, hib, polio vaccines, unwell since time of vaccinations, died a few days later.

Mother accused of SBS – served 3 years awaiting trial. Found NOT GUILTY.

Mitu, daughter of Khoka Sheikh

Measles vaccine, unwell since vaccine, hospitalised, died.

Sumyea, daughter of Shakhawat Hossain

Measles vaccine, unwell since vaccine, hospitalised, death

Abu Bakar, son of Suja Mia of Sabilapur village

Measles vaccine, unwell since vaccine, hospitalised, death

Osaka Prefecture

MMR vaccine, death

Zachary Strain

Oral polio vaccine, paralytic polio, death

Hayley Graves

Prevnar vaccine, vaccinated with second dose of prevnar at 9 months old. 30 hours later seizures started. In a coma for 45 days, having seizures the whole time. Death.

Ananya Kaewboon

DPT, Hepatitis B and polio vaccines, sudden death 1 day later.

Ashley Shipman

MMR vaccine, got SSPE as a result of measles virus in the vaccine, died a few years later at age 14.

Robert Francis

MMR vaccine, developed SSPE from measles virus in the vaccine, incontinence, sleeping 18 hours a day, coma, death.

Chloe Dwyer

MMR booster at 4 years old, pins and needles, paralysis, breathing difficulty, hospitalised, death.

Stacey Berry

MR vaccine during 1994 MR campaign. This 13 year old started fitting, was diagnosed with SSPE caused by the measles virus in the vaccine, died a few years later.

Hannah Buxton

MMR vaccine, seizure disorder. Continued seizures for 18 months, death

Kieran Fitzgerald

MMR vaccine, stopped crying, laughing and smiling. Became frightened of his toys (autism?)

Developed bowel disease. Died a year later, aged two.

Stevie Adams

MMR vaccine, developed meningitis, died.

This urabe brand of vaccine was later BANNED for causing meningitis.

Devin Simon

DTaP vaccine, seizure disorder, death.

Devan Womack

DPT vaccine, seizure disorder, death

Rita Gillooly

Flu vaccine, paralysis, death

Najiyah Hussain

This 3 year old girl was taken to the GP with a cold, and her parents persuaded to give her a flu vaccine. She then started having seizures and was taken to hospital. At hospital the doctor gave her nitrous oxide (gas and air) by mistake, instead of oxygen and she had heart failure and died.

Harry Richardson

Flu vaccine, paralysis, damage to spinal cord. This poor man was paralysed from the chest down for 4 years before he died due to spinal damage caused by the vaccine.

R Venkat Narsaiah of Bramhalakunta

Oral polio vaccine – baby started shivering after vaccine and then died suddenly.

Pramila Karaigudem

Oral polio vaccine, baby started shivering after vaccine and died suddenly.

Vance Walker

DTaP, polio, hib, prevnar, Hepatitis B and rotavirus vaccines – baby found dead in his crib 3 days later with bloody froth in his mouth and all over his clothes.

Yet To Be Named Infant of Geeta Mane

DPT, Hepatitis B, polio, BCG vaccines, baby died the next day.

Sunilkumar Sharma

DPT, hepatitis B, and polio vaccines – the baby died the next day.

Tahira Ansari

DPT and hepatitis B vaccines, sudden death

Peshala Hashani

This 12 year old girl had an allergy to eggs and her mother REFUSED CONSENT for her to be given a rubella vaccine. Peshala herself also refused. Despite this, she was told to 'go home to your mother and breast feed', and she was pulled by her tie and FORCIBLY vaccinated.

She began to itch immediately. By the time she had returned to class, she was experiencing chest pain and breathing difficulties.

She was taken to hospital and later died.

Sam Goldstein

This case from 1976 happened during the last faked 'swine flu pandemic' in which no one got swine flu but hundreds died from the vaccine.

Sam Goldstein was given a flu shot and got Guillain-Barre syndrome (a paralysing disease) which he later recovered from.

He was then given a swine flu vaccine, got paralysed again and died.

Cindy Apithy

Vaccines (report didn't say which kind), baby began crying for hours and 'going stiff' (seizures?). Baby developed a fever and was given medicine by the doctor. Baby started bleeding from her nose and mouth and then she stopped breathing.

Officials blamed her death on co-sleeping, but the mother was up with her all night due to her crying.

Marina McQuaig

Marina's mother was vaccinated with a flu shot at 11 weeks pregnant. Marina was born with a disorder where the skin doesn't grow properly on the hands and feet. Skin formation completes at around 11 weeks gestation and Marina's mother thinks that the thimerosal in the vaccine caused Marina's condition.

After her 2 month shots, Marina developed epilepsy. At 18 months she was given diphtheria, pertussis, tetanus, polio, Haemophilus Influenzae B, chickenpox and meningococcus vaccines, when she had a cold and in spite of mother's reservations.

This caused constant seizures, a 1 week stay in ICU, 2 weeks

in the hospital and the child nearly died.

She became severely developmentally delayed due to her seizures and was on lots of medications to try and control the seizures.

When Marina was 8 years old, she died from one seizure too many.

Joseph Paul

MMR vaccine, 3 days later he had a high fever and was given antibiotics.

A couple of weeks later he had a seizure and was hospitalised for 3 days.

A month afterwards Joseph was playing normally in the bath tub. His mother put his pyjamas on and he went to cuddle his father. Then he went to bed.

An hour later his mother checked on him and found him dead in his bed. Post-mortem showed that he died of encephalitis, which is a common vaccine side-effect.

Abigail Nelson

2 day old baby given hepatitis B vaccine.

She immediately began high-pitched screaming and throwing up her milk.

Her stool turned green. In her second week of life, she was cold to touch and shivering. Mother was advised to put a hat on the baby which made no difference. She began to turn purple around her lips and on her hands and feet.

Doctors refused to see her – stating they would see her at her one month check and just to keep her wrapped in blankets.

Mother begged for help and offered to pay cash which the doctor wouldn't accept because she was on medicaid.

Baby screamed for 6 hours continuously and then went to sleep at 11.30pm. Her mother discovered her dead in her crib at 6am the next morning.

Brooke Petkevicius

Gardasil vaccine, caused a blood clot that stopped her heart.

Jessica Ericzon

After Jessica's 2nd shot of Gardasil, she complained of pain in the head, sore joints and fatigue.

After her third shot she said this particular area at the back of her head hurt.

2 days after the third dose, her mother found her dead on the bathroom floor. Pathologist said her death was 'instant'.

Another doctor, Dr. Shaw who was promoting the vaccine, blamed her death on a toothbrush:

"We don't even know what she died of," Dr. Shaw said. "You could blame a toothbrush."

Jessica was a 17 year old girl with no previous health problems.

Nguyen Ngoc Minh

44 day old baby died 6 hours after being injected with Hepatitis B vaccine – another 2 babies also died after this baby died.

Neil Clark

Died a few hours after being injected with DPT and polio vaccines.

His twin brother also died at the same time (see below).

Authorities denied it, saying it was cot death. You cannot have two cot deaths at EXACTLY THE SAME TIME, and even if it had been, cot death is a term used to describe a sudden death of unknown cause, and it is not a diagnosis.

Michael Clark

Twin brother of Neil Clark – also died a few hours after being given DPT and polio vaccines, at the same time as his brother.

Christopher Blum

4 month old baby died a few hours after his first DPT, polio vaccines.

Pathologist found infection in Christopher's blood. His organs went 'missing' after post-mortem and could not be found.

Pathologist insisted death was cot death in spite of evidence of infection and the fact that the baby had been vomiting from the time of his shots until he was found dead a few hours later.

Christopher's father refused to accept the death certificate and wanted it registered as vaccine death. This was refused, so he did not bury him and kept his body in cold storage for 21 years, trying to get someone to investigate his son's death. Eventually the council court ordered him to have a funeral and accept the 'cot death' diagnosis.

Christopher's organs have never been found. They probably

contained vaccine virus and were got rid of.

Charlotte Curtis

DPT, hib, polio, meningitis C vaccines – death 6 days later.

Garrett Giles

DPT vaccine, anaphylactic shock, encephalopathy, collapse,
death.

Justin Bosch

DPT vaccine, anaphylaxis, death

Jennifer Lawson

DPT vaccine, became mentally retarded as a result, later died.

Gabriel Lucus Riggs

DPT vaccine, encephalitis, death

Montez Pittman

DPT vaccine, encephalitis, death

Aaron Raley

DPT, encephalitis, death

Natalie Sword

DPT, encephalitis, death

Cheyenne Michael Shyface

DPT, encephalitis, death

Brenda Scott-Sheppard

Vaccination, demyelinating disease, death

Huynh Thi Kim Hoa

MMR, immediate difficulty breathing, low heart rate, coma, death.

This woman was a 20 year old factory worker who was ordered to get MMR by her employer.

Savara Praveen

DPT vaccine, started frothing at the mouth and turned blue.
Died 10 hours later.

Natalie Morton

Cervarix vaccine, collapsed 30 minutes later. Given CPR, died in hospital a few hours later.

Tumour found on post-mortem, but would not have been asymptomatic as they asserted if it were large enough to kill her instantly.

Vaccines are also contraindicated in people with cancer so it could have been the straw that broke the camels back.

VAN UK is concerned that children are not screened for genetic or cancerous conditions prior to being vaccinated.

Ashanti Wasana

Rubella vaccine, immediate allergic reaction, death.

Lily Doherty

Seizure disorder after 2nd round of vaccines. Made worse by 3rd round.

Child eventually died on October 11th, 2002.

Freek Hagoort

This 8 year old boy died 3 days after MMR and DPT boosters. His parents are making an official complaint that they were not warned of the dangers of vaccination.

Hailey Lynn Winkler

Baby died after 4 month vaccines. Received 172 times the 'safe' level of mercury set by the EPA in her vaccines. Labelled as SIDS, but SIDS is not a diagnosis, it means the infant died suddenly and they don't know why.

Dhrushti Pingle

2 month old girl died one day after she was given her second dose of Hepatitis B, DPT and polio vaccines. She started crying and her nose started bleeding at 11pm the same day. She was taken to hospital and died the next morning.

Moshella Roberts

Gardasil vaccine. Died 4 days later after going to sleep at work and never waking up.

Santana G. Valdez

Gardasil vaccine. Started 'whistling' in her sleep after the vaccination which was subsequently recognised as breathing problems.

Died in her sleep aged only 18.

Pathologist found papillomatosis in her airways (warts caused by HPV that line the airways).

Recurrent Respiratory Papillomatosis.

Jasmine Renata

Gardasil vaccine. 18 year old, previously healthy girl had 3 injections of Gardasil and began to feel pain all over her body, tingling in her arms and legs, became tired and irritable and had a racing heart. After 6 months of progressively ill health, Jasmine's mother went to pick her up from work and found she wasn't there so she went home and discovered her daughter lying dead in bed (September 2009).

Chotu, son of Shyam Sunder Shukla

DPT vaccine. 2 and a half month baby was given DPT vaccine and died later that night.

Friends and relatives of the baby protested outside the local police station to try and get the doctor who vaccinated him, arrested.

Vijai, Surname Not Given

Polio vaccine. A 2 year old boy with history of wheezing was given polio vaccine when sick, began wheezing and stopped breathing a few hours after the drops.

Siobhan Boyle

This 2 year old girl died 2 weeks after H1N1 vaccine.

At her 9 week injections she became paralysed, blind, deaf and epileptic. Doctors denied it was caused by the vaccine.

They vaccinated her with H1N1 shot in December 09 and she was found dead in her bed 2 weeks later.

Catastrophic reactions such as this used to be admitted to and the person was contraindicated from ANY further vaccination of any kind. Then they changed it to any vaccination of the same type, then they changed it to 'must be vaccinated in hospital', now they just deny it, even when a perfectly healthy baby is paralysed and blinded and deafened with epileptic fits.

Dr. Lilia Rezig

H1N1 vaccine. Previously healthy 35 year old doctor with no diseases had the vaccine and dropped dead one day later.

Clayton Cachia

H1N1 vaccine. Healthy 23 year old man with no previous health problems had vaccine and collapsed at work 5 days later. Taken to hospital and died. Pathologist found his heart was swollen.

Alexandra Amaris Peters

Alexandra Amaris Peters, aged 23, daughter of David F. Peters and the late Mary Christine MacTaggart Peters, of 155 Stoddard Road, Lakeside, passed away quietly the morning of Dec. 31, 2009.

Alexandra, like thousands of other children, was brain damaged shortly after birth when she had a severe reaction to the

pertussis component of the DPT vaccine that is routinely administered to infants and young children.

Alexandra was much loved, and in addition to her father, David, and sister, Gabrielle, she is mourned by her long-term caregiver, Susan Fuller of Litchfield, numerous friends and relatives from Connecticut to California and a big orange tabby cat, "Baby."

Tracey Swatton

Measles vaccine. Had a measles vaccine at age 4 years. 6 days later she developed permanent epilepsy even though she had been well before that.

At one point had 197 fits in one week.

Found dead on the bathroom floor at age 37 by her husband. Family thinks another fit killed her and are certain they were triggered by the vaccination.

Luke Wilson

MMR vaccine. Became irritable and moody. He swelled up at the injection site. Six days later he complained of a sore head and toes. He then became limp and lifeless and was taken to hospital and put on life support. Three days after that he was found to be brain dead so doctor's turned off his support. The doctors admitted that it was MMR vaccine that had killed him.

He was only 2 years old.

Gaurav Vishwakarma

Measles vaccine – death. Baby was 9 months old.

Karnika Thakur

Measles vaccine – death. Baby was 11 months old.

Rohini

Measles vaccine – death. Baby was 13 months old.

Arman Vishwakarma

Measles vaccine – death. Baby was 9 months old.

Wang Xiao'er

Hepatitis B vaccine, gradual death. Baby was 9 months old.

Liu Ziyang

Encephalitis vaccine, rabies, Hepatitis B vaccines – death.
Baby was 8 months old.

Wang Shichao

Encephalitis vaccine, rabies, Hepatitis B vaccines – death.
Child was 3 years old.

Liu Yi

Encephalitis vaccine, rabies, hepatitis B vaccines – death.
Child was 3 years old.

6 Month old Baby – Name Unknown, Gosaintolla Village, India

Oral polio drops – Baby started foaming at the mouth and died.

Ashley Jade Epapara

2 year old twin. Given combination H1N1/seasonal flu vaccine. Started vomiting (as did her twin sister) and convulsing. Died in hospital 12 hours later. She was previously healthy.

Khusbhu Limbachia

Oral polio vaccine – this 2 month old baby girl developed a high fever after the vaccine and died 48 hours later.

Chura Malik

Oral Polio vaccine – this 6 month old was given the vaccine two weeks after recovering from measles, which was negligent, and against his parents wishes. He got a high fever and died the day after being vaccinated.

Kennie Ray Nelson Junior

Hepatitis B vaccine. This was a healthy 15 year old teenager who had gone for a 'routine physical' to attend a sports camp. He was given Hep B vaccine, collapsed whilst still in the clinic, started having convulsions and died.

Morgan Morongo

Anti-malaria injection called 'chloroquin', possibly fake medication? – child vomited immediately, then fainted and died.

Richard Kadiru

Anti-malaria injection called 'chloroquin' – possibly fake medication? – vomited immediately, fainted and died, along with his brother Morgan in the same incident.

Sanjana Dhende

Hep B, polio vaccines.

8 month old was vaccinated with Hep B one day and IPV the following day. Was seriously ill 1 hour later, died 2 hours, 45 minutes later.

She had a heart condition and should not have been vaccinated anyway.
